SAVED REPORT ARTIFACT

airgap-devkit

This self-contained report uses the current OxideSLOC workbench theme and keeps the saved HTML shareable without relying on external image routes.

Generated 2026-04-22 03:37:32 | OS windows / x86_64 | Files analyzed 56 | Files skipped 173

Run ID 8e8df709-2532-4ddc-bc6f-7c8f5217a4f1

COMMENTS

996

BLANK

1127

MIXED SEPARATE

0

Best-effort parse results

2

These files were analyzed, but the parser hit malformed or ambiguous content and fell back to a best-effort count.

Binary assets skipped

8

Binary bundles are excluded from source counting unless you explicitly opt into them.

Large files skipped by size limit

96

Artifacts and archives larger than the configured cap were skipped intentionally to keep runs fast and predictable.

Minified files skipped by policy

4

Generated and minified assets are being filtered out to avoid inflating code totals.

Unsupported or undetected text formats

64

These are usually docs, manifests, templates, or formats that have not been promoted into first-class analyzers yet.

Vendor files skipped by policy

1

Vendored third-party code is being excluded so the report stays focused on repository-owned source.

High-value support opportunities

This groups the noisy unsupported warnings into the next format buckets most worth classifying or supporting in the analysis core.

Opportunity	Count	Recommended next move
JSON manifests and config	42	Promote JSON manifests into a metadata bucket or add a light-weight JSON analyzer if you want them counted separately.
Documentation / text	10	Add a docs/text classification path so README, LICENSE, and markdown stop appearing as source-language misses.
HTML templates	4	Add HTML/template detection for web views and server-rendered pages to reduce unsupported-template noise.
Other unsupported text formats	4	Review this bucket and either map it to an existing metadata class or create a dedicated analyzer when it truly represents source.
Project metadata and packaging	3	Treat TOML, MANIFEST.in, and requirements files as metadata so they become intentional non-source records instead of generic warnings.
Plain text assets	1	Classify text asset placeholders as plain text or ignore them by policy.
